INTRODUCTION

As a front-end developer at JMS APP PTY LTD, we have successfully completed the logins and registration systems for our primary stakeholders, including learners, parents, and teachers, during our second month. Additionally, we have also implemented the learner admission process.

BODY

We successfully completed the logins, registration, and learner admission processes using PHP, Bootstrap, and JavaScript. Our first step was to create logins for all primary stakeholders, including learners, parents, and teachers. Next, we implemented the registration process, incorporating security features such as password recovery for forgotten passwords. Finally, we concluded with the learner admission process, ensuring that all necessary fields for high school applications were included. The remaining tasks for handling logins, registration, and learner admission are now with the back-end developers.
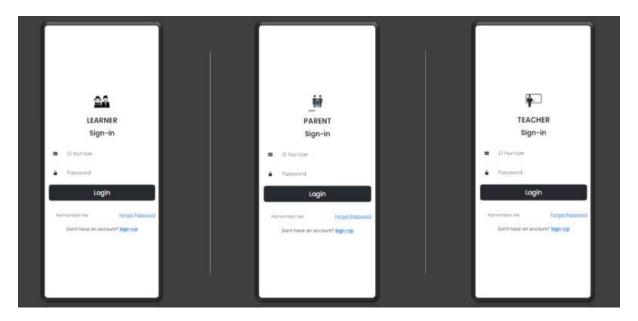

CONCLUSION

Following the successful completion of the logins, registration, and learner admission processes within the second month, our focus shifted to the second month's objectives. Specifically, we planned to develop the teacher, learner and parent functionality.
